

Raingentic

Make your existing business agent-commerce ready in hours

Connect an API or online store. Raingentic configures the products, policies, agent skills, and payment rails needed to buy and sell through agents.

raingentic.saibolla.com

Platform Connect anything Payment rails

One platform for agent buying and selling

Connect your business. Let agents transact.

Connect the APIs, products, payment providers, and policies your company already uses. Raingentic gives agents a governed way to discover, negotiate, buy, sell, and settle.

Buying

 **Buying agent**
Waiting for instructions

Find a compliant data
10,000 requests. Ker
\$300 and ask before
vendor.

Agents can reason. Businesses still cannot safely let them transact.

Products

APIs, services, subscriptions, and physical goods already live across disconnected systems.

Authority

Budgets, approval thresholds, seller restrictions, and payment permissions are not native to agents.

Execution

Stablecoin rails and card rails solve different purchases, with no shared control or receipt layer.

The missing product is not another wallet. It is governed commercial authority.

From an existing API or store to agent commerce in hours.

01

Connect

OpenAPI document
Online store or catalog
Billing or internal API

02

Configure

Products and prices
Negotiation boundaries
Approvals and payment rails

03

Publish

Buyer and seller agents
Agent Card and commerce contract
Skills and SDK integration

Included agent skill

Point Claude, Codex, or another coding agent at the skill. It inspects the business, asks for the required Rain and Monad credentials, and prepares the integration.

Keep the API, store, inventory, checkout, and fulfillment systems you already use.

One company configuration powers buying and selling.

BUY

Give the agent a mandate

Describe the outcome
Discover and compare sellers
Negotiate through A2A
Enforce company policy
Approve, pay, and verify

SELL

Publish what the business already sells

APIs, software, services, subscriptions, or physical products use the same pricing, negotiation, authorization, and receipt layer.

A live OpenAPI document becomes 18 agent-buyable products.

Selling > Products

Load demo data

Connect your catalog

Bring the products your company already sells. Raingentic normalizes them into one catalog for humans and purchasing agents.

Catalog source

Choose the interface your existing system provides.

OpenAPI document

Import every path, operation, schema, and endpoint.

Commerce platform

Connect any store through an app, plugin, or API.

Billing platform

Import products, plans, prices, and subscriptions.

Custom API or database

Connect a REST endpoint or your internal catalog service.

Website catalog

Extract public products and review them before publishing.

OpenAPI document

Provide an OpenAPI URL or upload the document. Each operation becomes independently configurable.

OpenAPI document

https://preflight.saibolla.com/openapi.json

Import endpoints

Load complete demo instead

Credentials are requested through the connector and remain server-side. The original system stays the source of truth for inventory, fulfillment, taxes, and checkout.

18 operations found

Review the imported endpoints, their evidence status, and pricing before publishing. Runtime responses preserve live, cached, derived, or simulated status.

Connected

Method	Endpoint	Product	Evidence	Published price
GET	/api/preflight/weather/metars	METAR observations	live	\$ 0.01
GET	/api/preflight/weather/tafs	TAF forecasts	live	\$ 0.015
GET	/api/preflight/weather/pireps	Pilot reports	live	\$ 0.02

18
independently priced
operations

13 live
3 derived
2 simulated

Price floors, discounts, payment rails, and negotiation rules publish with the catalog.

05

The buyer agent turns plain English into a controlled mandate.

Request

Buy 100 mission-readiness reports. Stay below \$1,500.

Structured authority

- Budget
- Maximum unit price
- Required quantity and quality
- Approved sellers
- Human-approval threshold

OpenAI helps prepare the plan.
Deterministic code decides whether it may execute.

A2A lets independent agents discover and negotiate.

Output: a structured commercial agreement for price, quantity, quality, and delivery. No payment permission yet.

Agreement becomes exact, signed payment authority.

Deterministic policy

Budget · unit price · seller · product · quantity · quality

Human checkpoint

\$1,450 negotiated
\$500 automatic limit
Nothing moves until approval

Official AP2 mandate

Buyer · seller · product · exact and maximum amount · payment method · recipient · expiration

One policy layer chooses the payment rail.

\$0.01

Monad x402

Machine-readable APIs and data
Test USDC settlement
Protected result released after verification

\$464

Rain scoped card

Traditional upstream vendor
Exact amount, MCC, and expiry
Bad merchant declined; good purchase settles

\$28,900

Escrow or checkout

High-value hardware or deposits
Solidity commercial terms
Fund, release, refund, or cancel

Small machine purchase. Controlled merchant procurement. High-value commercial agreement.

Rain connects agent commerce to cards and treasury operations.

Payments

Payments

Manage balances, cards, payment routes, and the spending authority available to company agents.

Rain payments

Manage balances, cards, bank accounts, and payment routes.

Treasury

Define what the company may do with stablecoin or cash balances that are not required for immediate operations.

Concept preview

No funds move from this page. Provider accounts and company eligibility must be verified before execution.

Treasury policy

The company keeps an operating reserve, limits how much capital may leave approved accounts, and requires a human decision before an external provider receives funds.

Minimum operating reserve

\$ 75000

Agents cannot allocate balances needed for payroll, vendors, cards, or normal operations.

Maximum treasury allocation

20%

Maximum share of eligible excess capital that a treasury agent may propose allocating.

Require human approval

Every investment, bridge, redemption, or trading action stops for review.

Allow external bridges

Required when an approved provider or asset is not available on the source n

Allow leveraged products

Disabled by default. Hyperliquid perpetual positions cannot be proposed whil

Approved strategy connections

Select a strategy to preview the required provider and execution path. None of these providers is connected yet.

Cash management

MONAD + RAIN

x402 settlement, card decline, approved settlement, posted transaction

DELIVERY

100 reports · 96% readiness · verified

Existing commerce in. Governed agent transactions out.

A practical adoption layer for Rain and Monad.

Best use of Rain

Scoped cards, policy declines, approved settlement, transaction retrieval, payment accounts, routes, and treasury movement.

General track

Agents discover, negotiate, stop for approval, move test or sandbox money, and verify delivery in one working flow.

Monad + Rain

Monad handles native machine settlement and high-value terms. Rain reaches traditional merchants and treasury routes.

Connect what the company already has. Become agent-commerce ready in hours.
